Palletizing Solutions for High Demands

Complex Tasks: growing automation demands and the economic efficiency of palletizing characterize the food market. As experts for transport and palletizer systems in the food branch we are well acquainted with the specific tasks involved.

- **We know our customers.** Our development and production are geared to the market and market demands of our customers.

- **Each of our units is unique.** Nevertheless our modular design makes extensions and add-ons possible at all times.

- **Our own development and design.** We are constantly improving our components. Each one corresponds to the high demands we place on them. The same goes for our Software development. Customers can create their own palletizing programs with our "PalletMaker" software tool.

- **Speed and thoroughness.** Our customers profit from our high production level. There are no delays and there is no quality loss.

- **High quality standards.** Quality also means excellently trained employees. Our customers can trust their competence and reliability.

Sample Products from our Food Line

High Speed Palletizer PA8

The PA8 palletizer is suitable for almost all consumer products in packs, cases, containers, etc. The unique advantages of this palletizer are reflected in its high output rate and precision operation in producing the exact pallet configuration required. The PA8 offers the highest capacity and greatest flexibility. The modular design allows for a set-up that corresponds to task requirements.

Pallet Shuttle Car PFW

The fully automatic pallet shuttle car PFW is used in modern palletizer centers and the outer zones of high-rise storage shelves. A connection of several material flow sources with an almost infinite amount of material flow targets is possible. This is of great importance, e.g., when differing pallet sizes coming from different pallet dispensers are to be distributed to numerous palletizers in a pallet center.

Case Palletizer KST2

The case palletizer can be put to use in all branches that handle plastic cases as containers. Bakeries and butcher shops make a wide use of these kinds of cases. Products are packed into cases at a particular stopping point and then automatically stacked in four towers onto a pallet.

FlexPalletizer Robot

The FlexPalletizer is the modern way to palletize. Its long reach makes it possible to palletize several lines at the same time with just one machine. The optimized drive technology makes the Flex-Palletizer the fastest in its class. Due to its easy programmability it can adapt to new tasks in the shortest time.

Gantry Palletizer

The gantry palletizers can be used for palletizing nigh to all products within the consumer goods industry such as bundles, boxes, bags, standard cases, and bakery baskets. The highly flexible gripper assortment makes not only handling many different kinds of products possible, but also pallets and the placement of interleaves.

Vertical Lift SPF

This lift is designed for the vertical transport of goods - lifting them to a given height as well as lowering them. The continuous chain run-around results in high speeds. The vertical lift comes with complete electrical installation and is ready for connection to an external control cabinet.
